

24 October 2017
 3532 exoplanets
 (~2600 systems, ~560 multiple)
 [numbers from NASA Exoplanet Archive]

Exoplanet Detection Methods

Indirect/ miscellaneous

- protoplanetary disks
- debris disks/colliding planetesimals
- star accretion/pollution
- white dwarf pollution
- radio emission
- X-ray emission
- gravitational waves

Dynamical

Microlensing

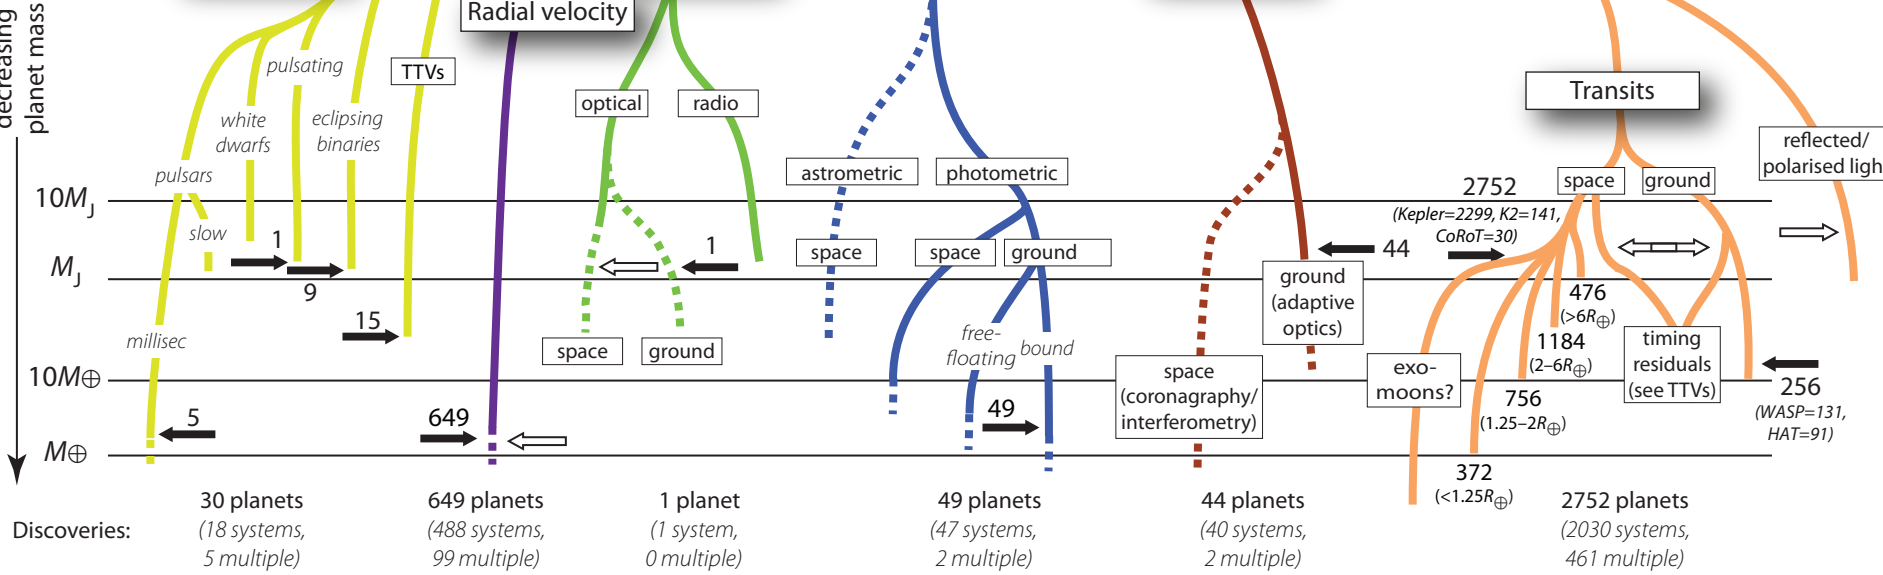

Photometry

Imaging

Transits

reflected/ polarised light

decreasing planet mass

— existing capability ···· projected n = planets known → discoveries ⇔ follow-up detections
